

Nouryon

Nouryon - your reliable Sodium Chlorate & Hydrogen Peroxide supplier

Nouryon is uniquely positioned to meet your needs for consistent high quality bleaching agents

From our production facilities in Brazil, Canada, Chile, France, Finland, Sweden, Norway and USA we are able to effectively serve our customers with Sodium Chlorate, Hydrogen Peroxide and Chlorine Dioxide. Our world class manufacturing technology, application know-how, optimized supply chain and global logistics solutions provide customers with an advantage for their operations.

In certain geographic regions, Nouryon maintains a dedicated fleet of trucks, isotainers, and railcars; we also offer flexible specialty packaging solutions in the form of big bags. We ship our products to customers worldwide, under the name Eka ®

Pulp & Paper - we make it bright & white

Sodium Chlorate is a versatile product used in various applications

Sodium Chlorate is a raw material for Chlorine Dioxide generation which is a key bleaching agent used in the production of Elemental Chlorine Free (ECF) bleached wood pulp for paper products all over the world. Other common applications for Chlorine Dioxide include use as a broad-spectrum biocide and primary disinfectant for potable and cooling water.

Hydrogen Peroxide - a powerful & environmentally friendly oxidizing agent

Hydrogen Peroxide is well known as a sustainable bleaching agent

As a key bleaching agent, Hydrogen Peroxide is used for bleaching of both mechanical and chemical pulps. Supporting Elemental Chlorine Free (ECF) bleaching, and as the main product in Totally Chlorine Free (TCF) bleaching methods.

Beyond its role in bleaching, Hydrogen Peroxide serves as a specialty oxidant in diverse industries such as mining, batteries, water treatment, cellulosic textiles, food packaging and cleaning. There are four different grades in the Eka Hydrogen Peroxide Portfolio: Technical, Aseptic, Chemical and Food.

Eka Engineering

Eka Engineering specializes in the design and supply of Chlorine Dioxide plants and equipment to the pulp and chemical industries

Eka Engineering is the engineering and contracting division that is part of our bleaching chemicals business. We specialize in the design, build and supply of Chlorine Dioxide plants and equipment to the pulp and chemical industries. We offer completely new turnkey plants, the upgrade and repair of existing plants and comprehensive services for large-scale production and application of Chlorine Dioxide, for both vacuum and atmospheric technology plants.
